

DATE: May 6, 2024

TO: Lucas County Engineer, Mike Pniewski; P.E., P.S.

FROM: Lucas Soil and Water Conservation District

By: D j Mears

SUBJECT: Annual Ditch Maintenance Report

In accordance with our MOU, this annual report is hereby submitted on ditches which were improved under Section 6131.01 to 6137.15 O.R.C.

Mosquito Creek Ditch #74

During our 2024 annual inspection we found the 24" enclosure on the DeVault's property restricting ditch flow. We have been trying to work out this problem with the County Engineer since the summer of 2023. We need to continue the spraying of brush regrowth. We estimate the ditch maintenance balance to be \$5,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$3,000.00.

Schmitz Ditch #424

During our 2024 annual inspection we found the lower mile of ditch to have erosion issues. These issues are bank instability due to flow against toe of ditch; eroded out bank on outside bends; concentrated surface water flow into ditch and improper outlet extensions. We will also need to control recently mowed brush by spraying methods on this entire ditch. We estimate the ditch maintenance balance to be -\$36,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$50,000.00.

Disher Ditch #428

We need to continue the spraying of brush regrowth. Also, we will need to replace the deteriorating subsurface tile outlet ends. We estimate the ditch maintenance balance to be \$1,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$4,000.00.

Ballard Ditch #888

During our 2024 annual inspection we recommend that this ditch be bottom dipped the entire length. Due to high cost of this work, \$52,500, we will be collecting it over a two-year period. We need to continue the spraying of brush regrowth. We estimate the ditch maintenance balance to be -\$40,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$40,000.00.

Householder Ditch #891

We will also need to control recently mowed brush by spraying methods on this entire ditch. We estimate the ditch maintenance balance to be \$17,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$0.00.

Collins Ditch #911

We need to continue the spraying of brush regrowth. We estimate the ditch maintenance balance to be \$5,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$0.00.

Drennan Ditch #1045

We need to continue the spraying of brush regrowth. We estimate the ditch maintenance balance to be \$65,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$0.00.

Van Fleet Ditch #1049

We need to continue the spraying of brush regrowth. We estimate the ditch maintenance balance to be \$10,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$0.00.

Lone Oak Ditch #1048

We need to continue contracting for brush control on this ditch by mechanical removal. We estimate another \$20,000 for brush removal. After this collection a more detailed inspection will be needed to determine where we continue with our brush control. We estimate the ditch maintenance balance to be \$-20,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$30,000.00.

Wilhelm Ditch Watershed Improvement #1051

We need to continue contracting for brush control on this ditch by mechanical removal. We estimate another \$20,000 for brush removal. We are planning to possibly perform a bottom dip-out of main ditch in 2026. We estimate the ditch maintenance balance to be \$-20,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$30,000.00.

Niles Ditch Watershed Improvement #1052

No planned work is scheduled for the next year. I have requested a ditch profile survey by the LCE Office for this ditch to determine what is the actual proper depth in ditch since additional drive culverts have been installed since original ditch survey.

Ford Ditch #1058

This ditch was recently constructed and will be needing brush control in 2025. We estimate that cost to be \$1,000.00. We request a collection amount in the sum of \$2,000.00.

Beecher Ditch #1866

We need to continue the spraying of brush regrowth. We estimate the ditch maintenance balance to be \$10,000.00 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$0.00.

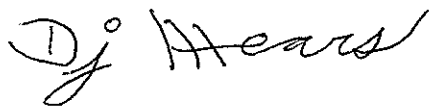

Bench/Hageman Ditch #1917

During our 2024 annual inspection we found the upper section of ditch above the two-stage ditch to have erosion issues. These issues are bank instability due to flow against toe of ditch; eroded out bank on outside bends; concentrated surface water flow into ditch and improper outlet extensions. We will also need to control recently mowed brush by spraying methods on this entire ditch. We estimate the ditch maintenance balance to be -\$2,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$30,000.00.

Zaleski Ditch #2035A

We need to continue the spraying of brush regrowth. We estimate the ditch maintenance balance to be \$12,000 after the proposed work items for 2024 and 2025 is deducted. We request a collection amount in the sum of \$0.00.

Respectfully Submitted,

A handwritten signature in black ink that reads "Dj Mears". The signature is written in a cursive style with a large, stylized "D" and "M".

D J Mears

Lucas County Soil & Water Conservation District

I am writing because I do not see the need for what I feel is an excessive Ditch Assessment on my 2023 Real Estate Taxes. I was assessed \$389.21 as my portion of an ordered collection of \$10,000 by the Lucas County Engineer for The Beecher Ditch. Since the planned maintenance was for spraying of weeds only & recommended no collection of additional funds since there were sufficient monies available from previous collections, I do not understand why there was a need to collect \$10,000. The ditch was cleaned just a couple of years ago so shouldn't require major work for some years yet.

Re: Wilhelm Maintenance Ditch

Dear Dj Mears:

In regards to the grass filter strip required under Sec. 6131 of the Ohio Revised code, the Dike along Wilhelm Ditch on our property has an existing 30' grass strip which exceeds the required grass filter strip. In addition, the Dike prevents the water runoff of our property from entering Wilhelm Ditch.

The root system of the vegetation on the Dike supports the integrity of the Dike. Your proposed spraying of the Dike and killing the vegetation will compromise the integrity of the Dike. This will produce the opposite effect of the filter strip by allowing your chemicals to enter the ditch and possibly the Dike.

We have tried to explain this to your people in the field and were told we should send a letter explaining the issue.

There is no need to establish a grass filter strip as ours already exceeds the requirement. Please do not spray our Dike.

Sincerely,
John Gradel & Sons Farms, Inc.

Mark N. Gradel
President

CC: Mike Pniewski, Lucas County Engineer

CERTIFICATE OF DITCH MAINTENANCE BASE REDUCTION LUCAS COUNTY, OHIO

This application must be filed with the Lucas SWCD by May 1st in order to be considered for this year Tax Duplicate. Certified ditch maintenance base reduction applications will be forwarded to the Lucas County Engineer and the Lucas County Commissioners by the first day of July each year. Several levels of ditch maintenance base reduction will be considered with the following options (Maximum of 50% reduction in accordance with ORC Section 6137.09):

A: A 10% Maintenance Base Reduction (MBR) may be obtained by establishing and maintaining a minimum ten (10') foot permanent grass berm along each side of the maintenance ditch.

B: An additional 10% MBR may be obtained by installing surface runoff control structures where needed on the maintenance ditch.

C: An additional 10% MBR may be obtained by controlling herbicide resistant broadleaf and noxious weeds in the grass berm along maintenance ditch. This will be for first 5 years of the grass berm establishment.

D: An additional 1% per foot width MBR may be obtained by installing additional width to the minimum grass berm up to a maximum 25 feet. Maximum reduction for additional width would be 15%.

E: An additional 20% MBR may be obtained by completing and implementing a Comprehensive Conservation Plan.

Please note that the conservation practices above may be eligible for certain program payments through federal and /or State agencies.

CERTIFICATE OF DITCH MAINTENANCE BASE REDUCTION LUCAS COUNTY, OHIO

This application must be filed with the Lucas SWCD by May 1st in order to be considered for this year Tax Duplicate. Certified ditch maintenance base reduction applications will be forwarded to the Lucas County Engineer and the Lucas County Commissioners by the first day of July each year. Several levels of ditch maintenance base reduction will be considered with the following options (Maximum of 50% reduction in accordance with ORC Section 6137.09):

A: A 10% Maintenance Base Reduction (MBR) may be obtained by establishing and maintaining a minimum ten (10') foot permanent grass berm along each side of the maintenance ditch.

B: An additional 10% MBR may be obtained by installing surface runoff control structures where needed on the maintenance ditch.

C: An additional 10% MBR may be obtained by controlling herbicide resistant broadleaf and noxious weeds in the grass berm along maintenance ditch. This will be for first 5 years of the grass berm establishment.

D: An additional 1% per foot width MBR may be obtained by installing additional width to the minimum grass berm up to a maximum 25 feet. Maximum reduction for additional width would be 15%.

E: An additional 20% MBR may be obtained by completing and implementing a Comprehensive Conservation Plan.

Please note that the conservation practices above may be eligible for certain program payments through federal and /or State agencies.

A: A 10% Maintenance Base Reduction (MBR) may be obtained by establishing and maintaining a minimum ten (10') foot permanent grass berm along each side of the maintenance ditch.

B: An additional 10% MBR may be obtained by installing surface runoff control structures where needed on the maintenance ditch.

C: An additional 10% MBR may be obtained by controlling herbicide resistant broadleaf and noxious weeds in the grass berm along maintenance ditch. This will be for first 5 years of the grass berm establishment.

D: An additional 1% per foot width MBR may be obtained by installing additional width to the minimum grass berm up to a maximum 25 feet. Maximum reduction for additional width would be 15%.

E: An additional 20% MBR may be obtained by completing and implementing a Comprehensive Conservation Plan.

Please note that the conservation practices above may be eligible for certain program payments through federal and /or State agencies.
